

## High Temperature Quick Disconnects

High Temp Quick Disconnects are reusable, high temperature two-way shut off fittings used with vacuum connectors. They are available as a complete set (male/female) or as separate halves.

Once vacuum is applied, the two part design of the Disconnects enables them to be quickly and easily disconnected from each other in order to shut off air flow. This allows the vacuum connectors to remain under vacuum pressure after the vacuum source has been disconnected. Parts can then be moved from the bagging area to the curing area without loss of vacuum.

### Physical Properties

Material	Carbon Steel
O-Ring Seal Material	Viton
Hose Connection	Threaded
Screw Thread	1/4" female NPT
Coupling Size	1/4"
Manufacturer	Airtech International
Manufacturer Part Number	Set: AQD 500BF, Male: AQD 500 Male, Female: AQD 500 Female

### Technical Properties

Max Temperature	500°F
-----------------	-------

Note: The barbed fitting in the above picture is only available when purchasing the complete Quick Disconnect Set.
